

NEW MICRO AUTONOMOUS VEHICLES LAUNCHED BY PLANET OCEAN

Exciting news as Planet Ocean launched the new ecoSUB- μ and ecoSUB-m – Autonomous Underwater Vehicles at the NOC Marine Autonomous and Technology Showcase which took place at the National Oceanography Centre, Southampton.

These vehicles have been developed in collaboration with the National Oceanography Centre as part of a project funded by Innovate UK to develop a launch and recovery system for multiple AUVs from Unmanned Surface Vessels. Other partners in the project include ASV Ltd and the University of Southampton. This soft launch comes after just one year into a two year project with the next phase all about testing before the product officially comes to market. The full product launch will be at Ocean Business in April 2017.

A spin out company from Planet Ocean has been formed to concentrate on the AUV's "ecoSUB Robotics Ltd".
